

POPULATION PROJECTIONS SAY IT ALL:

S. 1348 IS A DISASTER FOR AMERICA!

America's economic, social and environmental future — along with its quality of life — is at risk in the current Senate immigration reform bill (S. 1348). Whatever the well-intentioned trade-offs in the bill, the most basic question of all has been ignored — how many Americans should there be?

Even with the nation's population now exceeding 300 million, many appear to believe there are no limits, or those that do exist need not be addressed on the current legislators' watch. Astronomical is not too strong a term for the population growth that will result from green-carding the 12 to 20 million illegal immigrants already here, admitting their family members, creating new opportunities for fraud, and opening the doors to millions of new guest workers and their dependents.

The heightened border security measures proclaimed in the present bill are likely to be another empty promise like those enacted with the 1986 amnesty.

Census data shows that since 1990 more than 60 percent of the nation's population growth is due to immigrants and their U.S.-born children. Admission of the massive numbers now considered, amplified by family reunification and continued illegal immigration, could rocket America's population to 500 million by 2050, with close to one billion Americans a real prospect by the end of the century.

We cannot let Congress put our country on a reckless growth path that will aggravate our present social and resource problems and create untold new ones in years ahead. America is already vastly overpopulated at over 300 million.

**Senators, NPG members
demand that you vote for a
livable future for all Americans.
Vote "NO" on S. 1348.**
