

0 50 100 150 200 250 300 million

1790

In
the
last
two
cent-
uries

1845

alone
the U.S.
populace
has grown

1900

exponentially,
increasing from
under 8 million to
close to 325 million.

1955

This growth correlates
strongly with nearly all
negative environmental,
economic and social change:
water pollution, deforestation,
plant and animals species extinction,
lack of natural resources, atmospheric
greenhouse gas concentration, classroom
sizes, traffic, dangerous crime, infrastructure
collapse, water and food scarcity, and many more.

2010

We are to blame for each, but we can be the solution.
*On the verge of irreversible change, the U.S. population
necessitates a steady decline for a sustainable future.*
